WORK EXPERIENCE

Software Engineer

Salescode.ai, Gurugram, Haryana

August 2024 – Present

- Collaborated with business stakeholders to design and refine KPI frameworks for analytics dashboards and Manager/Supervisor apps; enabled performance tracking across 50+ teams and improved decision-making efficiency.
- Built and optimized KPI analytics systems using Java, MySQL, and Elasticsearch; improved dashboard load times by 20–30% and reduced query latency by ~30%.
- Contributed to React.js-based dashboard UI development, enhancing data visualization and usability for hierarchical performance monitoring.
- Automated KPI batch processing via Jenkins CI/CD pipelines, reducing manual effort by 30–40% and improving data processing reliability.

PROJECTS

Real-Time Event Processing Platform

[GitHub](#)

Java · Spring Boot · PostgreSQL · Redis · Apache Kafka · Prometheus · Grafana

- Architected an event-driven system with producer, consumer, and monitoring services to process real-time streaming data.
- Implemented Kafka-based pipelines with multiple producers/consumers, ensuring reliable message handling and fault tolerance.
- Designed asynchronous workflows with retry mechanisms, idempotency handling, and distributed system patterns.
- Integrated observability using Prometheus and Grafana, enabling real-time system monitoring and faster issue detection.
- Optimized data flow and processing efficiency, improving throughput and reducing processing latency under load.

Insights Hub: GitHub Analytics Platform

[GitHub](#) | [Live](#)

FastAPI · Next.js · PostgreSQL · Redis · GraphQL · LLM Integration · OAuth2

- Built a full-stack analytics platform to generate automated developer insights and code behaviour analysis using LLMs.
- Designed backend APIs with FastAPI and async processing, improving system responsiveness and scalability.
- Implemented Redis caching and optimized GraphQL API usage, reducing redundant calls and lowering response times.
- Integrated secure OAuth2 authentication with JWT-based session handling for user management.
- Developed a responsive Next.js frontend for interactive data visualization and seamless user experience.
- Structured data pipelines for repository analysis, enabling efficient ingestion and transformation of GitHub data.

SKILLS

Java, Go, Python, JavaScript | Spring Boot, Gin, FastAPI, REST APIs, Microservices | MySQL, PostgreSQL, Elasticsearch | Kafka, Redis | Jenkins, Docker, CI/CD | React, Next.js, Tailwind

ACHIEVEMENTS

Lead Performer Award — Recognized for outstanding performance and consistent high-impact contributions in current role, delivering scalable backend solutions and driving measurable improvements in system performance and analytics.

EDUCATION

Bachelors of Technology in Information Technology

Guru Tegh Bahadur Institute of Technology

2021–2025
