SUMMARY

Full-stack engineer (Java backend, React.js frontend) with 2 years designing, shipping and operating a real-time analytics platform in production: 4 microservices (Java/Netty, React.js/Node.js) serving 50+ FMCG client organizations, including clients with hundreds of thousands of retailers each. The only engineer hands-on across every service, driving client onboarding, multi-tenant customization and the Jenkins-to-EC2 release pipeline. Strong in low-latency API design with Elasticsearch and Redis.

PROFESSIONAL EXPERIENCE

Software Engineer — Salescode.ai **Aug 2024 – Aug 2026**

SalesLens, real-time sales analytics platform · Gurugram · Java, Netty, Elasticsearch, Redis, React.js, Node.js, AWS, Jenkins

- Migrated SFA and eB2B clients from next-day legacy reports to real-time metrics, shrinking data freshness from 12 hours to 5 minutes via incremental, checkpoint-based ingestion (DynamoDB pointers, scheduled Jenkins runs)
- Slashed dashboard API latency 75% (700–800 ms to under 200 ms) with a Redis-cached runtime aggregation API, and served user/location/division breakdowns in under 300 ms via an Elasticsearch pivot index
- Engineered hierarchical KPI roll-ups (day, month, custom-range, year) the legacy service lacked, powering a manager app for 10,000+ manager and CXO-level users and feeding 6 downstream apps
- Onboarded 50+ client organizations across 3 product lines by externalizing client-specific formulas and dashboard layouts into backend and UI configuration, enabling new tenants to go live without changing logic for existing ones
- Spearheaded all 4 services (React.js/Node.js UI, Java compute core, configuration service, JWT-secured real-time API) as the only hands-on engineer; mentored QA engineers on KPI logic, DB schemas and client-specific test automation
- Drove production releases across 6 EC2 instances and EKS clusters through a Jenkins, S3 and EC2 artifact pipeline, handling production support and root-cause analysis
- Accelerated an ETL pipeline 90% (30–40 min to 3–5 min) by rebuilding ingestion of ML-generated recommendations from AWS S3, giving business teams same-day access
- Automated a 1–2 hours/day manual L2 reporting task (copying numbers, screenshots, emails per client) into a self-serve scheduled mailer needing only a one-time 5–10 min setup (DynamoDB, Puppeteer, Nodemailer)

PROJECTS

Insight Hub — Gamified GitHub Habit Tracker github.com/tushar27x/insightsHubV2

Java 21, Spring Boot, Spring AI, PostgreSQL, Redis, GraphQL, OAuth2/JWT, Next.js, Docker

- Built the backend in Java 21/Spring Boot with Spring AI and virtual threads (GitHub GraphQL ingestion via OAuth2/JWT into Postgres and Redis, AI journal summaries via Groq with Gemini failover), deployed Dockerized on AWS EC2 with the Next.js frontend on Vercel

Socratese — Socratic Tutor over Obsidian Notes (RAG) github.com/tushar27x/socratese-cli

Python, Chroma, OpenAI embeddings, Claude, SQLite

- Architected a local RAG pipeline over a 237-note, 851-chunk vault grounding an LLM tutor that only asks questions; shipped persistent SQLite sessions and validated the system with 249 mutation-verified tests under strict type checking

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, Go
Backend: Netty, Spring Boot, Spring AI, Node.js, REST API design, GraphQL, Microservices, OAuth2/JWT, Multi-tenant design
Data & Infra: Elasticsearch, Redis, Kafka, MySQL, PostgreSQL, DynamoDB, AWS (EC2, EKS, S3), Docker, Jenkins CI/CD, Git, Vercel
Frontend & AI: React.js, Next.js; RAG, embeddings, Claude API, Groq, multi-provider LLM failover
Fundamentals: DSA, OOP, SOLID, Design Patterns, System Design, Agile/Scrum

EDUCATION

B.Tech, Information Technology — Guru Tegh Bahadur Institute of Technology, Delhi **2021 – 2025**

ACHIEVEMENTS

- Lead Performer Award (2025), chosen from a 7-person team for delivering the custom KPI computation logic
- Promoted from Trainee to Software Engineer within 6 months of joining Salescode.ai
