SUMMARY

Backend engineer who owned a real-time, multi-tenant KPI analytics platform end-to-end — gathering requirements from business teams, integrating client-specific logic, and supporting it in production. Builds Python/FastAPI services — async APIs over PostgreSQL and SQLAlchemy, Redis caching, OAuth2/JWT auth — with production experience across AWS, Elasticsearch, Redis, and Kafka, plus hands-on RAG and LLM-orchestration work.

PROFESSIONAL EXPERIENCE

Software Engineer — Salescode.ai

Aug 2024 – Aug 2026

KPI Analytics & Dashboard Platform (SalesLens) · Gurugram, Haryana

- Cut dashboard API latency from 700-800ms to under 200ms by building a runtime query aggregation API with Redis caching, replacing a static layout that re-aggregated 2 years of history on every request
- Enabled real-time KPI breakdowns by user, location and division under 300ms with a pivot index strategy on Elasticsearch, where per-request aggregation across 3 dimensions had been too slow
- Reduced an ETL pipeline's runtime by 90% (30-40 minutes to 3-5) by rebuilding how it consumed ML-generated recommendations from AWS S3, giving business teams same-day access
- Eliminated batch delay in KPI reporting with an event-driven scheduler that polls every 30 seconds and orchestrates in-memory KPI calculation, replacing scheduled batch runs
- Cut KPI update latency from every 12 hours to 5 minutes by redesigning the batch pipeline for incremental fetches with pointers stored in DynamoDB, then automating it on Jenkins CI/CD into a scheduled, repeatable, recoverable run — replacing hand-started runs that failed with no recovery path
- Delivered a designation/year/period-wise KPI attribution view (Excel export), giving leadership its first per-person view
- Onboarded and supported 50-60 client organizations (large FMCG brands) across 3 product lines (SFA, eB2B, COE), translating business-team requirements into client-specific KPI logic and building hierarchical aggregation from individual sales reps up to manager and admin-level views
- Served as the single KPI source for 6 downstream consumers across the org — DMS portal, SFA and eB2B apps, Manager and Supervisor apps, and the Skill Will dashboard — each pulling project- and client-specific KPI logic via API
- Won the Lead Performer Award (2025), selected from a 7-person team, for independently designing and delivering the platform's custom KPI computation logic

PROJECTS

Socratese — Socratic Tutor over Obsidian Notes (RAG)

github.com/tushar27x/socratese-cli

Python (Typer, Textual), OpenAI embeddings, Chroma, Anthropic Claude, SQLite, pytest, pyright strict

- Built a local RAG pipeline over a 237-note, 851-chunk vault — markdown/wikilink parsing, heading-based chunking, batched embeddings, Chroma with per-vault filtering — grounding an LLM tutor that only asks questions, never answers
- Resolved 6-turn question loops by moving stall detection into deterministic code after 3 measured prompt fixes failed (1 made adherence worse), revealing the incomplete note on exit
- Shipped a terminal app with resumable SQLite sessions, 249 mutation-verified tests (app driven headlessly) and strict pyright

Insight Hub — GitHub Analytics Platform

github.com/tushar27x/insight_hub

Python (FastAPI, async), PostgreSQL, SQLAlchemy, Redis, GraphQL, OAuth2/JWT, Next.js

- Engineered an async FastAPI backend that pulls repo data via GitHub's GraphQL API, normalizes it into PostgreSQL via SQLAlchemy, and caches results in Redis to stay within GitHub's rate limits for analytics workloads
- Implemented failover across 2 LLM providers with structured, verifiable outputs plus cross-domain OAuth2 + JWT auth between separately hosted frontend and backend

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, Go, SQL

Backend & APIs: FastAPI (async), REST API Design, SQLAlchemy, OAuth2/JWT, Microservices, Spring Boot, Netty, OOP, SOLID, Design Patterns, Data Structures & Algorithms

Data, Messaging & Cloud: PostgreSQL, MySQL, Redis, Elasticsearch, Kafka (event-driven), GraphQL, AWS (EC2, S3, DynamoDB)

DevOps & Practices: Jenkins CI/CD, Docker, Git, logging & monitoring, production support, root-cause analysis, Agile/Scrum

AI/LLM Systems: RAG (embeddings, vector search, retrieval grounding), prompt design and evaluation, LLM workflow orchestration, multi-provider failover, structured/verifiable outputs

EDUCATION

B.Tech, Information Technology — Guru Tegh Bahadur Institute of Technology | 2021 – 2025 | CGPA: 9.04
