SUMMARY

Software Engineer with 2 years building KPI analytics platforms and backend systems in production. Experienced with Java, Kafka, Elasticsearch, and Redis in real workloads. Open to backend and analytics engineering roles

EDUCATION

Guru Tegh Bahadur Institute of Technology

2021 – 2025

Bachelor of Technology, Information Technology · New Delhi, India

WORK EXPERIENCE

Software Engineer Trainee → Software Engineer | Salescode.ai

Feb 2024 – Present

Gurugram, Haryana

- Designed and implemented an Elasticsearch index strategy enabling location and product-division level drill-down for KPI metrics, improving analytical granularity across the platform.
- Built an internal onboarding dashboard for Business Analysts to self-configure client Lines of Business onto the platform, removing the need for engineers to manually configure each new client setup.
- Built automated test coverage for KPI analytics workflows, catching regression issues that previously required manual verification before each release.
- Built React.js dashboard components for hierarchical KPI visualization, translating complex nested data structures into navigable manager and supervisor views.
- Automated KPI batch processing jobs via Jenkins pipelines, replacing manual runs and improving consistency of scheduled data processing.
- Built high-concurrency backend services using Netty for non-blocking I/O, improving throughput for latency-sensitive analytics workloads.
- Received Lead Performer Award (2025) for delivering scalable backend solutions and driving measurable improvements in system performance and analytics

PROJECTS

Real-Time Event Processing Platform

Java · Spring Boot · PostgreSQL · Redis · Apache Kafka · Prometheus · Grafana

- Architected an event-driven microservices system with producer, consumer, and monitoring services to process high-throughput real-time streaming data.
- Implemented Kafka-based pipelines with retry mechanisms, idempotency handling, and fault tolerance; integrated Prometheus and Grafana for real-time observability.
- Designed asynchronous workflows using distributed system patterns to improve throughput and reduce processing latency under load.

Insights Hub – GitHub Analytics Platform

FastAPI · Next.js · PostgreSQL · Redis · GraphQL · LLM · OAuth2 · JWT

- Built a GitHub analytics platform that uses an LLM to generate personality-style developer insight reports and roast summaries from repository activity data.
- Designed async FastAPI backend with Redis caching and optimized GraphQL usage; integrated OAuth2 + JWT authentication for secure session management.
- Developed a responsive Next.js frontend with interactive data visualizations and structured ingestion pipelines for GitHub data.

SKILLS

Languages: Java, Python, JavaScript, Go, TypeScript

Backend: Spring Boot, FastAPI, Node.js, Netty, REST APIs, Microservices

Databases: MySQL, PostgreSQL, Elasticsearch, Redis

Infra & DevOps: Apache Kafka, Jenkins, Docker, CI/CD, Prometheus, Grafana

Frontend: React.js, Next.js, TypeScript
