SUMMARY

Software engineer with 2 years building and running a real-time analytics platform in production: 4 microservices (Java/Netty, React/Node.js) serving 50-60 FMCG client organizations, some with hundreds of thousands of retailers each. The only engineer on the team hands-on across every service, leading client onboarding, multi-tenant customization and the Jenkins-to-EC2 release pipeline. Strong in low-latency API design with Elasticsearch and Redis, and in turning complex business rules into scalable system design.

PROFESSIONAL EXPERIENCE

Software Engineer — Salescode.ai

Aug 2024 – Aug 2026

SalesLens, real-time sales analytics platform · Gurugram · Java, Netty, Elasticsearch, Redis, React, Node.js, AWS (EC2, EKS, S3, DynamoDB), Jenkins

- Moved SFA and eB2B clients off a next-day (n-1) legacy reporting service onto real-time metrics, cutting data freshness from **12 hours to 5 minutes** by redesigning batch ingestion around incremental, checkpointed fetches (pointers in DynamoDB) on scheduled Jenkins runs
- Cut dashboard API latency **75% (700-800ms to under 200ms)** by replacing per-request re-aggregation of 2 years of history with a Redis-cached runtime aggregation API, and served user/location/division breakdowns in **under 300ms** through an Elasticsearch pivot-index design
- Engineered hierarchical roll-ups the legacy service never had: each user's contribution aggregated up the reporting chain at day, month and custom-range level, with year views computed at runtime from precomputed months; this powered a cross-platform manager app for ASM/RSM/admin users and made the platform the metrics source for **6 downstream apps**
- Led onboarding of **50-60 client organizations across 3 product lines** by moving client-specific formulas and dashboard layouts into backend and UI configuration, so new tenants went live without changing logic for existing ones
- The only engineer hands-on across all **4 services** (React/Node.js UI with auth gateway, Java compute core, config service, JWT-secured real-time API layer); the team's go-to for business logic, cross-service debugging and guiding teammates on new metric pipelines
- Owned production releases across **6 EC2 instances** and EKS clusters through a Jenkins, S3 and EC2 artifact pipeline, along with production support and root-cause analysis
- Cut an ETL pipeline's runtime **90% (30-40 min to 3-5 min)** by rebuilding how it consumed ML-generated recommendations from AWS S3, giving business teams same-day access
- Delivered a self-serve client-impact mailer for business analysts: configurable per-client report posters (DynamoDB config, Puppeteer rendering) emailed on daily, weekly or monthly schedules (cron, Nodemailer)

PROJECTS

Insight Hub — GitHub Analytics Platform

github.com/tushar27x/insight_hub

Python, FastAPI (async), PostgreSQL, Redis, GraphQL, OAuth2/JWT, Next.js

- Developed an async backend that pulls repo data via GitHub's GraphQL API and caches it in Redis to stay within rate limits; added failover across 2 LLM providers and cross-domain OAuth2 + JWT auth

Socratese — Socratic Tutor over Obsidian Notes (RAG)

github.com/tushar27x/socratese-cli

Python, Chroma, OpenAI embeddings, Claude, SQLite, pytest, pyright

- Designed a local RAG pipeline over a 237-note, 851-chunk vault grounding an LLM tutor that only asks questions; shipped with resumable SQLite sessions and 249 mutation-verified tests under strict pyright

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, Go

Backend: Netty, Spring Boot, Node.js, FastAPI, REST API design, GraphQL, Microservices, OAuth2/JWT, Multi-tenant design

Data & Infra: Elasticsearch, Redis, Kafka, MySQL, PostgreSQL, DynamoDB, AWS (EC2, EKS, S3), Docker, Jenkins CI/CD, Git

Frontend & AI: React.js, Next.js; RAG, embeddings, Claude API, multi-provider LLM failover

Fundamentals: DSA, OOP, SOLID, Design Patterns, System Design, Agile/Scrum

EDUCATION

B.Tech, Information Technology — Guru Tegh Bahadur Institute of Technology, Delhi

2021 – 2025

CGPA: 9.04

ACHIEVEMENTS

- Lead Performer Award (2025), selected from a 7-person team, for independently designing and delivering the platform's custom KPI computation logic
- Promoted from Trainee to Software Engineer within 6 months of joining Salescode.ai
