SUMMARY

Full-stack engineer with 2 years owning production features on a real-time, multi-tenant KPI analytics platform (SalesLens) serving FMCG organizations, from React.js dashboards and client-facing reporting to Elasticsearch and Redis-backed APIs. Cut API latency from 700-800ms to under 200ms, delivered sub-300ms real-time breakdowns, and built customizable, scheduled client launch posters. Also shipped LLM-backed products with provider failover and a RAG pipeline.

PROFESSIONAL EXPERIENCE

Software Engineer — Salescode.ai

Aug 2024 – Aug 2026

KPI Analytics & Dashboard Platform (SalesLens) · Gurugram, Haryana · React.js, Java, Netty, Elasticsearch, Redis

- Gave client and project-team leadership a custom launch poster per client showing the positive outcomes of using our mobile apps (SFA, eB2B, DMS); project teams could fully customize each poster (configuration in DynamoDB, rendering with Puppeteer)
- Let project teams schedule the complete poster to be emailed daily, weekly or monthly, using a background cron job and Nodemailer
- Contributed to the complete redesign of the dashboard UI in React.js
- Cut dashboard API latency from 700-800ms to under 200ms by replacing a static layout that re-aggregated 2 years of history on every request with a runtime aggregation API backed by Redis caching
- Delivered real-time KPI breakdowns by user, location and division in under 300ms with an Elasticsearch pivot index strategy, replacing per-request aggregation across 3 dimensions
- Cut an ETL pipeline's runtime by 90% (30-40 minutes to 3-5) by rebuilding how it consumed ML-generated recommendations from AWS S3, giving business teams same-day access
- Removed batch delay in KPI reporting with an event-driven scheduler (30-second cycle) that orchestrates in-memory KPI calculation, and moved hand-started batch jobs onto Jenkins CI/CD as scheduled, repeatable, recoverable runs
- Scaled the platform for multi-tenant use across FMCG organizations with full per-organization data and logic isolation, powering the KPI views clients used to track ML output quality, team productivity and process adherence
- Gave leadership its first per-person view with a designation/year/period-wise KPI attribution report (Excel export)
- Won the Lead Performer Award (2025) for independently designing and delivering the platform's custom KPI computation logic

TECHNICAL SKILLS

Languages & Frontend: Java, Python, JavaScript, TypeScript, Go, SQL, React.js, Next.js

Backend & Data: Netty, Spring Boot, Node.js, FastAPI, REST, GraphQL, Microservices, Elasticsearch, Redis, Kafka, MySQL, PostgreSQL, DynamoDB

Automation & Ops: Puppeteer, Nodemailer, cron scheduling, Docker, Jenkins CI/CD, AWS (EC2, S3, DynamoDB), Git, logging & monitoring, root-cause analysis

AI & Fundamentals: Claude API, OpenAI embeddings, RAG, ChromaDB, LLM failover; DSA, OOP, SOLID, Design Patterns, Agile/Scrum

PROJECTS

Socratese — Socratic Tutor over Obsidian Notes (RAG)

github.com/tushar27x/socratese-cli

- Built a local RAG pipeline (Python, Chroma, OpenAI embeddings, Claude) over a 237-note, 851-chunk vault, grounding an LLM tutor that only asks questions, never answers; shipped as a terminal app with resumable SQLite sessions and 249 mutation-verified tests under strict pyright

Insight Hub — GitHub Analytics Platform

github.com/tushar27x/insight_hub

- Engineered an async FastAPI backend (PostgreSQL, Redis, GraphQL, Next.js) that pulls repo data via GitHub's GraphQL API and caches it, cutting redundant calls behind rate-limited analytics; added failover across 2 LLM providers and cross-domain OAuth2 + JWT auth

EDUCATION

B.Tech, Information Technology — Guru Tegh Bahadur Institute of Technology

2021 – 2025

Delhi, India | CGPA: 9.04
