SUMMARY

Software Engineer with 1.5+ years of experience building scalable backend systems and analytics platforms. Proficient in Java, Python, and JavaScript with hands-on experience in distributed systems, event-driven architecture, and full-stack development. Skilled in Spring Boot, Kafka, Elasticsearch, Docker, and CI/CD pipelines.

EDUCATION

Guru Tegh Bahadur Institute of Technology

2021 – 2025

Bachelor of Technology, Information Technology · New Delhi, India

WORK EXPERIENCE

Software Engineer | [Salescode.ai](#)

August 2024 – Present

Gurugram, Haryana

- Designed and implemented an Elasticsearch index strategy enabling location and product-division level drill-down for KPI metrics, improving analytical granularity across the platform.
- Built an internal onboarding dashboard for Business Analysts to self-configure client Lines of Business onto the platform, reducing manual onboarding effort and engineering dependency.
- Wrote automated test cases for KPI analytics workflows, reducing reliance on manual testing and improving regression coverage.
- Built and optimized KPI analytics systems using Java, MySQL, and Elasticsearch; reduced dashboard query latency through targeted query optimization and index tuning.
- Contributed to React.js-based dashboard UI development, improving data visualization for hierarchical performance monitoring.
- Automated KPI batch processing via Jenkins CI/CD pipelines, reducing manual intervention and improving data processing reliability.

ACHIEVEMENTS

Received Lead Performer Award (2025) for delivering scalable backend solutions and driving measurable improvements in system performance and analytics

PROJECTS

Real-Time Event Processing Platform

Java · Spring Boot · PostgreSQL · Redis · Apache Kafka · Prometheus · Grafana

- Architected an event-driven microservices system with producer, consumer, and monitoring services to process high-throughput real-time streaming data.
- Implemented Kafka-based pipelines with retry mechanisms, idempotency handling, and fault tolerance; integrated Prometheus and Grafana for real-time observability.
- Designed asynchronous workflows using distributed system patterns to improve throughput and reduce processing latency under load.

Insights Hub – GitHub Analytics Platform

FastAPI · Next.js · PostgreSQL · Redis · GraphQL · LLM · OAuth2 · JWT

- Built a full-stack analytics platform using LLMs to generate automated developer insights and code behaviour analysis from GitHub repository data.
- Designed async FastAPI backend with Redis caching and optimized GraphQL usage; integrated OAuth2 + JWT authentication for secure session management.
- Developed a responsive Next.js frontend with interactive data visualizations and structured ingestion pipelines for GitHub data.

SKILLS

Languages: Java, Python, JavaScript

Frameworks: Spring Boot, FastAPI, REST APIs, Microservices

Databases: MySQL, PostgreSQL, Elasticsearch, Redis

Infra & DevOps: Apache Kafka, Jenkins, Docker, CI/CD, Prometheus, Grafana
